

HYGAIN[®]
FEEDING CHAMPIONS SINCE 1983

SPECIAL INGREDIENTS

HYGAIN RBO[®] Equine Performance Oil™ - HYGAIN RBO[®] Equine Performance Oil™ is a blend of rice bran oil, omega 3,6 & 9 essential fatty acids and natural anti-oxidants known to improve the health and structural integrity of cell membranes. HYGAIN RBO[®] oil plays an important role in maximising energy efficiency due to its energy dense nature and is digested efficiently in the small intestine reducing the 'sugar high' associated with high grain diets, providing slow release energy. HYGAIN RBO[®] promotes growth and development of the muscular system, top line and a healthy skin and coat.

Natural Vitamin E - This unique and highly stable form of Natural Vitamin E known as RRR- α -tocopherol is up to 5 times more bio available and potent than regular synthetic sources of Vitamin E. Research has shown that this form of Natural Vitamin E provides higher retention levels in plasma further aiding antioxidant, immune, cardiovascular, circulatory, neuromuscular and reproductive functions.

Super Fibres - As the name suggests super fibre is a product that contains highly digestible fibre with very little non-digestible fibre. These highly digestible fibre sources provide horses with a calorie content similar to grain, however since they are fibre they are safer to feed and given that Super Fibres are digested in the hindgut (cecum and colon) they do not produce rapid changes in blood sugar (Fizz) like grain. Super fibres are as safe to feed as chaff or hay and even more digestible.

HYGAIN[®] MICRBARLEY[®] - HYGAIN[®] MICRBARLEY[®] is rapidly converted and absorbed as glucose in the small intestine, providing energy twice as efficiently as starch fermented in the large intestine. The starch in HYGAIN[®] MICRBARLEY[®] is over 98% digested in the horse's small intestine whereas the starch in unprocessed and conventionally processed grains is only 20-30% digested. By transferring the site of digestion back to the small intestine we reduce the burden of fermentation on the large intestine and the accumulation of lactic acid, heat and ammonia. HYGAIN[®] MICRBARLEY[®] grains provide for safer, cooler feeding which can in turn lead to fewer incidences of colic, laminitis, acidosis, fatigue, nervousness and reduced performance.
